

Create in Flash/ActionScript a Tic Tac Toe game like you see it on the screenshot. The application should not have their “own intelligence” it should simply provide the possibility for two humans to play with each other. That means on a 3*3 raster you can per mouse click place a symbol. Alternating player A and player B. In the upper status line you can see the current round and current player. With the button “Start a new game” you can reset the game in its starting stage, while the player that starts is chosen randomly. If a player wins no more symbols can be placed and in the upper status line appears a status “Player A/B win the game”. The entire game field starts to blink. With confirming of “Start a new game” everything starts from the beginning.

RUNDE 1: SPIELER A

EIN NEUES SPIEL STARTEN
